DWELL CONSTRUCTION

Meta Lead Generation Campaign

Real Client Campaign | Meta Ads | Lead Generation | Delhi NCR & Meerut

Campaign Period: 17–24 August 2026

Platform: Facebook & Instagram via Meta Ads

Objective: Lead Generation

My Role: End-to-end campaign execution

01. Project Overview

Client: Dwell Construction
Industry: Interior Design & Construction
Platform: Meta Ads — Facebook & Instagram
Campaign Objective: Leads
Campaign Duration: 17–24 August 2026
Daily Budget: ■500/day
My Role: End-to-end campaign planning, setup, creative strategy, copy development, conversion-path selection, launch, monitoring, and lead-quality review.

The Business

Dwell Construction provides residential and commercial design and construction services, including terrace garden design and construction, residential design and construction, interior design, and commercial-space design and construction. For this campaign, the immediate focus was **Terrace Garden** as the primary priority, followed by **Interior Design**.

02. Campaign Objective

The primary objective was to generate **qualified prospects** for Dwell Construction's services.

Terrace Garden → Instant Form
Capture project and qualification information before the prospect moved further into the sales process.

Interior Design → WhatsApp
Allow prospects to initiate a direct conversation about their requirements.

03. Audience Strategy

Location

Delhi NCR + Meerut
Delhi NCR was selected because it was Dwell Construction's primary service area. Meerut was included based on the client's requirement.

Age

25–60
I chose this range to focus the campaign on an audience more likely to be in a stage of life where home improvement, renovation, interior design, or property-related projects could be relevant.

Gender

All genders
I deliberately kept gender targeting broad rather than restricting the audience without a strong initial reason to exclude either gender.

Placement

Advantage+ Placements
The campaign was allowed to use Meta's available Facebook and Instagram placements rather than manually restricting placements at launch.

04. Campaign Architecture

Dwell Construction — Leads
■
■■■ Terrace_Garden — ■300/day
■ ■■■ Desire

■ ■■■ Hook
■ ■■■ Testimonial
■
■■■ Interior_design — ■200/day
■■■ Before_its_built
■■■ Makeover

Why this structure?

• Allocate budget according to business priority.

• Evaluate each service independently.

• Use different conversion paths.

• Compare creative performance within each service.

• Avoid treating two different customer journeys as one identical campaign.

05. Budget Allocation

Ad Set	Daily Budget	Priority
Terrace Garden	■300	Primary
Interior Design	■200	Secondary
Total	**■500**	

The higher allocation for Terrace Garden reflected the **client's priority** for that service and the relative strength of the available creative assets. The campaign used **ad-set-level budget allocation**, giving each service its defined daily budget.

06. Creative Strategy

Terrace Garden — Desire

The concept compared an ordinary terrace with what the space could become through a professionally designed terrace garden. The objective was to help the viewer visualize the possibility for their own terrace, create aspiration, and then move them toward requesting a quote.

Role in funnel: Desire → Consideration → Lead

Terrace Garden — Hook

The Hook creative used a project/process-oriented approach designed to capture attention and lead the viewer toward the project reveal.

Role in funnel: Attention → Interest → Lead

Terrace Garden — Testimonial

The Testimonial creative used an actual customer testimonial from a completed terrace garden project. The purpose was to introduce social proof and trust.

Role in funnel: Trust → Consideration → Lead

Interior Design — Before_its_built

This creative used a rendered interior design video to help potential customers visualize what a completed interior could look like.

Role in funnel: Visualization → Interest → Conversation

Interior Design — Makeover

The Makeover creative focused on the transformation of a home's appearance through interior design.

Role in funnel: Transformation → Interest → Conversation

07. Conversion Strategy

Terrace Garden — Instant Form

I used Meta Instant Forms to collect more structured information from potential prospects. The form included name, phone number, project location, budget, and expected project timeline. I also introduced **OTP verification** as an additional layer to reduce low-intent submissions and improve the usefulness of the information passed to the client.

Interior Design — WhatsApp

For Interior Design, I used **WhatsApp** as the conversion location. The idea was to reduce friction and allow prospects to directly communicate their requirements with the business.

08. My Role & Execution

• Set up the Meta advertising environment and obtained partner access.

• Created the campaign and ad-set structure.

• Defined the audience and allocated the budget.

• Developed and finalized ad copy.

• Decided which creative belonged to each ad set.

• Selected conversion locations.

• Set up the Instant Form with qualification questions and OTP verification.

• Launched and monitored the campaign.

• Reviewed lead quality with the client.

The client provided raw footage for the Terrace Garden content, which was edited for advertising use. I developed the copy concepts and finalized the messaging with AI-assisted brainstorming.

09. Launch & Early Performance

Day 1

4 leads

Day 2

6 new leads

The early response indicated that the campaign was generating demand immediately. At the creative level, **Desire** emerged as a particularly strong-performing creative within the Terrace Garden ad set. At the same time, **Before_its_built** was generating messaging conversations for Interior Design.

10. The Unexpected Creative Change

The **Desire** creative had to be removed after the initial four days. It was not removed because of poor performance; it had been one of the strongest-performing creatives. The creative was subsequently removed at the client's request because of a **third-party ownership/usage concern involving the project featured in the video**.

My response

I expected that removing a strong-performing creative could negatively affect campaign performance. However, because the campaign was still in its learning phase, I chose **not to make additional unnecessary changes immediately** and allowed the remaining creatives to continue running. The **Testimonial** creative subsequently began generating leads.

11. Campaign Results

Overall Campaign Performance

Metric	Result
Total Spend	■3,389.80
Reach	19,384
Impressions	25,520
Frequency	1.32

By Conversion Path

Service	Conversion	Result	Cost
Terrace Garden	Instant Form	31 form leads	■66.19/lead
Interior Design	WhatsApp	38 messaging conversation	■35.21/conversation

Important: These results should not be combined into a single “69 leads” figure because they represent different conversion actions: form submissions versus messaging conversations.

12. Lead Quality & Sales Handoff

My responsibility in this campaign was **lead generation and qualification**, not closing the client's sales. I therefore did not attribute final customers, revenue, or ROAS to the campaign without verified client-side data.

I did, however, cross-check lead quality with the client. The client subsequently issued approximately **8–10 quotations** to prospects generated through the campaign.

> **Scope note:** Final closed sales and revenue were not tracked within my campaign scope, so I have not claimed them as campaign conversions.

13. What the Campaign Demonstrated

1. Creative strategy mattered

Different creative angles produced different responses. Desire was particularly effective at generating initial response for Terrace Garden, while Testimonial demonstrated its ability to generate leads after Desire was removed.

2. Conversion design should match the service

I did not force both services into the same conversion mechanism: Terrace Garden used Instant Forms for structured qualification, while Interior Design used WhatsApp for direct communication.

3. Performance data isn't the only constraint

Desire was performing well, but it still had to be removed because of a business/usage constraint. The highest-performing creative isn't always the creative you are allowed to keep running.

4. Avoid unnecessary intervention

After Desire was removed, I did not immediately restructure the campaign or make multiple simultaneous changes. The remaining Testimonial creative subsequently began producing leads.

14. What I Would Test Next

• Create more variations based on the strongest-performing creative angles.

• Develop additional testimonial-based creatives.

• Use more real-project footage where available rather than relying heavily on renders.

• Test different hooks around the same core offer.

• Compare Instant Form qualification against WhatsApp for the same service where appropriate.

• Improve downstream tracking from lead → qualified → quotation → customer.

• Evaluate future optimization using cost per qualified lead and eventual customer value, not only cost per lead.

15. Key Takeaway

> “This campaign taught me that performance marketing is not simply about launching ads and watching metrics. It involves making structured decisions around audience, budget, creative, conversion paths, and lead quality — while adapting to real-world business constraints.”

The campaign generated **31 form leads and 38 messaging conversations** from ■3,389.80 in spend, while client feedback indicated approximately **8–10 quotations** were issued to generated prospects.

More importantly, the campaign gave me hands-on experience managing a real paid-media campaign from planning and setup through launch, creative evaluation, lead qualification, and post-launch decision-making.

Tools & Platforms

Meta Ads Manager — Campaign setup, audience targeting, budget allocation, ad delivery, creative management and performance monitoring.

Meta Instant Forms — Lead capture and qualification.

WhatsApp — Direct-response conversion path for Interior Design.

AI / ChatGPT — Creative brainstorming and copy development support.

Spreadsheets — Campaign reporting and performance analysis.
